

The Leader in Endpoint Data Protection

Altiris Connector

An effective approach to protecting data on endpoints includes not only data loss protection via encryption, but also the ability to effectively manage systems, configurations, applications, and asset inventory. By actively managing the entire asset lifecycle, the Altiris® Asset Management Solution from Symantec addresses key components of this need. The GuardianEdge™ Altiris Connector extends this single console environment, making crucial data protection controls for deployment and monitoring available directly from the Altiris Notification Server™.

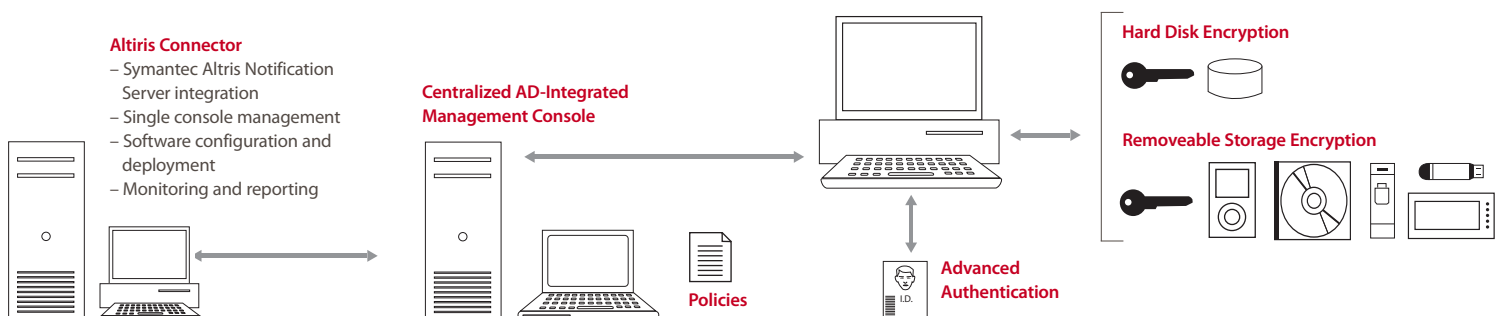

The GuardianEdge Altiris Connector integrates directly with the Altiris Notification Server™ Console, allowing IT administrators to improve security by streamlining the deployment and monitoring of GuardianEdge Hard Disk Encryption and GuardianEdge Removable Storage Encryption through the same familiar management console they already use for asset management, configuration management, patch and update control and more.

This integration also allows organizations to proactively identify and protect systems at risk of data loss. Once identified, administrators can easily create installation packages and deploy GuardianEdge Hard Disk Encryption and Removable Storage Encryption to those endpoints from the Altiris console. And once deployed, the combined solution makes it simple to monitor completion, compliance and ongoing audit status from the console.

Key features

- Proactively discover systems that present risks to protected information and remediate from the Altiris Notification Server Console
- Supported GuardianEdge products: Hard Disk Encryption, Removable Storage Encryption, Advanced Authentication
- Easily create and deploy installation packages from Altiris
- View and create standard and custom reports within the Altiris Notification Server Console

Altiris Notification Server Integration

Technology Overview

The GuardianEdge Altiris Connector extends data protection for laptops, desktops and removable storage by integrating GuardianEdge controls with the rich environment of systems management, asset management, patch and update and other tools available in the Altiris Notification Server.

The seamless integration with the Altiris Notification Server delivered by the GuardianEdge Altiris Connector integration supports GuardianEdge Hard Disk Encryption and GuardianEdge Removable Storage Encryption, providing the ability to:

- Monitor the environment for systems that present risks of data loss
- Create and deploy GuardianEdge software installation packages
- Report on data protection status of systems and installations

The solution also supports GuardianEdge Advanced Authentication through the creation of installation packages for Removable Storage Encryption and Hard Disk Encryption products.

Technical Information

Supported GuardianEdge Products

- GuardianEdge Hard Disk Encryption 9.1.0 or later
- GuardianEdge Removable Storage Encryption 3.1.0 or later
- GuardianEdge Advanced Authentication 1.0 or later (included in other Hard Disk Encryption and Removable Storage Encryption package creation)

Deployment

- Configure initial data protection policies
- One-click deployment

Standard Hard Disk Encryption Reporting

- Installation Status
- Installed software by OS
- Installed software by GuardianEdge Hard Disk Encryption version
- Systems without GuardianEdge Hard Disk Encryption
- Drive encryption status: encrypted, number of partitions
- Last check in status
- One-time password recoveries

Standard Removable Storage Encryption Reporting

- Installation status
- Installed software by OS
- Installed software by GuardianEdge Removable Storage Encryption version
- Systems without GuardianEdge Removable Storage Encryption
- Removable Storage Encryption policy
- Removable Storage Encryption recovery certificate availability
- Removable Storage Encryption portability
- Last check in status

Common reports for GuardianEdge products

- Registered users: Date of registration and number of registered users
- Client administrators
- Local client administrators

Extended monitoring for earlier versions of GuardianEdge Products

- GuardianEdge Framework and Hard Disk versions 8.2.0 or greater
- GuardianEdge Removable Storage version 2.0.0 or greater

Client OS support

- Microsoft Windows® Vista Business, Enterprise and Ultimate 32 bit Editions
- Windows XP Professional and Tablet Edition
- Windows 2000

Enterprise management console OS support

- Windows XP Professional 32 bit
- Windows Vista Business, Enterprise and Ultimate 32 bit
- Windows Server 2003 Standard or Enterprise
- All - .Net 1.1 or 2.0

Altiris Notification Server

- Altiris Notification Server 6.0 SP3 Rollup Pack 7

Server requirements :

- Windows Server 2003, Standard or Enterprise
- Database - Microsoft SQL Server 2000 SP5, or SQL Server 2005
- .NET 1.1 or 2.0
